

## FIRST - ORDER LOGIC

### INFERENCE

- \* reducing FOL inference to propositional inference
- \* simple / restricted method
  - Forward Chaining
  - Backward Chaining
- \* Resolution

### UNIVERSAL INSTANTIATION (UI):

$$\forall x \text{ King}(x) \wedge \text{greedy}(x) \Rightarrow \text{Evil}(x)$$

$$\text{King}(\text{John}) \wedge \text{greedy}(\text{John}) \Rightarrow \text{Evil}(\text{John})$$

$$\text{King}(\text{Rick}) \wedge \text{greedy}(\text{Rick}) \Rightarrow \text{Evil}(\text{Rick})$$

$$\text{King}(\text{Father}(\text{John})) \wedge \text{greedy}(\text{Father}(\text{John})) \Rightarrow \text{Evil}(\text{Father}(\text{John}))$$

### GROUND TERM

$$\forall x \alpha$$

---

$$\text{substitute}(\{x/g\}, \alpha)$$

$g$ : ground term

### TERM

Variable  $x$

Constant

Function  $(term_1, \dots, term_n)$

If finite space, equivalent.

## EXISTENTIAL INSTANTIATION (EI):

$$\exists x \text{ Crown}(x) \wedge \text{OnHead}(x, \text{John})$$

$$\text{Crown}(c_1) \wedge \text{OnHead}(c_1, \text{John})$$

↓

Skolem constant

$$\frac{\exists x \alpha}{\text{Substitute}(\{x/k\}, \alpha)} \quad k: \text{constant symbol that does not appear anywhere else in the KB.}$$

FOL KB      PL KB

(Satisfiability is preserved)

## ENTAILMENT IN FOL IS SEMIDECIDABLE:

Herbrand (1930): If sentence  $\alpha$  is entailed by an FOL KB it is entailed by a finite subset of the propositional KB.

Nesting

- John
- Father (John)
- Father (Father (John))

For  $n = 0$  to  $\infty$  do

- \* Create a propositional KB by instantiating with depth- $n$  terms.

- \* See if  $\alpha$  is entailed by this KB.

If  $\Delta \models \alpha$  then  $\Delta_0 \models \alpha, \Delta_1 \models \alpha, \Delta_2 \models \alpha \dots$   
one of it will satisfy.

## DEFINITE CLAUSES:

Horn Clause: at most one positive literal

Definite Clause: exactly one positive literal

$$\neg A \vee \neg B \vee C$$

$$[A \wedge B \Rightarrow C]$$

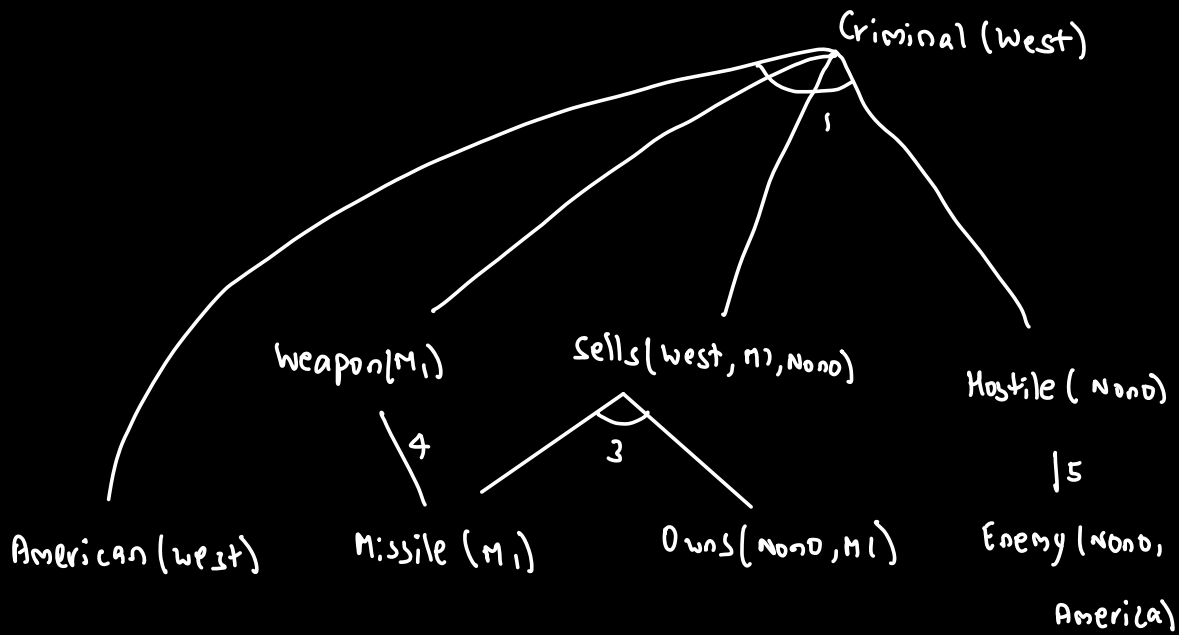

if-then rules with positive literals on each side.

## FORWARD-CHAINING:

1.  $\text{American}(x) \wedge \text{Weapon}(y) \wedge \text{Sells}(x, y, z) \wedge \text{Hostile}(z) \Rightarrow \text{Criminal}(x)$
2.  $\exists x \text{ Owns}(\text{Nono}, x) \wedge \text{Missile}(x)$   
     $\hookrightarrow \text{Owns}(\text{Nono}, M_1) \wedge \text{Missile}(x)$
3.  $\text{Missile}(x) \wedge \text{Owns}(\text{Nono}, x) \Rightarrow \text{Sells}(\text{West}, x, \text{Nono})$
4.  $\text{Missile}(x) \Rightarrow \text{Weapon}(x)$
5.  $\text{Enemy}(x, \text{America}) \Rightarrow \text{Hostile}(x)$
6.  $\text{American}(\text{West})$
7.  $\text{Enemy}(\text{Nono}, \text{America})$

To show:  $\text{Criminal}(\text{West})$

"Datalog".

BACKWARD CHAINING:

(with improvements)

(logic programming)

(Prolog)

## RESOLUTION IN FOL:

$$\Delta \models \alpha \quad \Delta \wedge \neg \alpha \quad \text{check if Satisfiable}$$

$\underbrace{\hspace{1.5cm}}_{\text{CNF}}$

$$\Delta \models \alpha \quad \text{iff} \quad \Delta \wedge \neg \alpha \quad \text{is unsatisfiable}$$

## UNIFICATION:

$$1. \alpha = \text{knows}(\text{John}, x) \quad \beta = \text{knows}(\text{John}, \text{Jane})$$

$$\text{unifier} \rightarrow \{x / \text{Jane}\}$$

$$\alpha, \beta$$

$$\text{unify}(\alpha, \beta) = \theta$$

$$\alpha \theta = \beta \theta$$

$$\theta = \{x / \text{Jane}\}$$

$$2. \text{knows}(\text{John}, x) \quad \text{knows}(y, \text{os})$$

$$\theta = \{y / \text{John}, x / \text{os}\}$$

$$3. \text{knows}(\text{John}, x) \quad \text{knows}(y, \text{mother}(y))$$

$$\theta = \{y / \text{John}, x / \text{mother}(\text{John})\}$$

$$4. \text{knows}(\text{John}, x) \quad \text{knows}(x, \text{os})$$

$\underbrace{\hspace{1.5cm}}$  Cannot be unified.

$\forall x \text{ Rich}(x) \Rightarrow \text{Unhappy}(x)$

$\text{Rich}(\text{Ken})$

---

CNF:

$\neg \text{Rich}(x) \vee \text{Unhappy}(x)$

$\text{Rich}(\text{Ken})$

---

$\theta = \{x/\text{Ken}\}$

$\text{Unhappy}(\text{Ken})$

RESOLUTION EXAMPLE:

Jack owns a dog

Every dog owner is an animal lover

No animal lover kills an animal

Either Jack or curiosity killed the cat

Cats are animals

---

Did curiosity kill the cat?

$$\Delta: \exists x \text{ Dog}(x) \wedge \text{Own}(\text{Jack}, x)$$

$$\forall x (\exists y \text{ Owns}(x, y) \wedge \text{Dog}(y)) \Rightarrow \text{Alover}(x)$$

$$\forall x \text{ Alover}(x) \Rightarrow (\forall y \text{ Animal}(y) \Rightarrow \neg \text{Kills}(x, y))$$

$$\text{Kills}(\text{Jack}, \text{Tuna}) \vee \text{Kills}(\text{Cur}, \text{Tuna})$$

$$\text{Cat}(\text{Tuna})$$

$$\forall x \text{ Cat}(x) \Rightarrow \text{Animal}(x)$$

---

$$\alpha: \text{Kills}(\text{Cur}, \text{Tuna})$$

CNF:

$$\Delta: 1. \text{Dog}(\Delta)$$

$$2. \text{Owns}(\text{Jack}, \Delta)$$

$$3. \neg \text{Owns}(\Delta, y) \vee \neg \text{Dog}(y) \vee \text{Alover}(\Delta)$$

$$4. \neg \text{Alover}(\Delta) \vee \neg \text{Animal}(y) \vee \neg \text{Kills}(\Delta, y)$$

$$5. \text{Kills}(\text{Jack}, \text{Tuna}) \vee \text{Kills}(\text{Cur}, \text{Tuna})$$

$$6. \text{Cat}(\text{Tuna})$$

$$7. \neg \text{Cat}(\Delta) \vee \text{Animal}(\Delta)$$

$$\neg \alpha \quad 0. \neg \text{Kills}(\text{Cur}, \text{Tuna})$$

- |   |                                       |
|---|---------------------------------------|
| 8. $\neg \text{owns}(x, D) \vee \text{Allover}(x)$                  | (1, 3 $\theta = \{x/D\}$ )            |
| 9. $\text{Allover}(\text{Jack})$                                    | (2, 8 $\theta = \{x/\text{Jack}\}$ )  |
| 10. $\text{Animal}(x)$  | (6, 7 $\theta = \{x/\text{Tuna}\}$ )  |
| 11. $\neg \text{Allover}(x) \vee \neg \text{Kills}(x, \text{Tuna})$ | (4, 10 $\theta = \{x/\text{Tuna}\}$ ) |
| 12. $\neg \text{Kills}(\text{Jack}, \text{Tuna})$                   | (9, 11 $\theta = \{x/\text{Jack}\}$ ) |
| 13. $\text{Kills}(\text{Jack}, \text{Tuna})$                        | (0, 5)                                |
| 14. Empty clause  | (12, 13)                              |

Contradiction

$\Delta \wedge \neg \alpha$  is unsatisfiable

$\Delta \models \alpha$

## CONVERSION TO CNF:

$$\forall x [\forall y \text{ Animal}(y) \Rightarrow \text{Loves}(x, y)] \Rightarrow [\exists y \text{ Loves}(y, x)]$$

1. Eliminate  $\Rightarrow, \Leftrightarrow$

$$\forall x [\neg \forall y \neg \text{Animal}(y) \vee \text{Loves}(x, y)] \vee [\exists y \text{ Loves}(y, x)]$$

2. Move  $\neg$  inwards

$$\neg(\alpha \wedge \beta) = \neg\alpha \vee \neg\beta$$

$$\neg(\alpha \vee \beta) = \neg\alpha \wedge \neg\beta$$

$$\neg\forall x \alpha = \exists x \neg\alpha$$

$$\neg\exists x \alpha = \forall x \neg\alpha$$

$$\forall x [\exists y \neg(\neg\text{Animal}(y) \vee \text{Loves}(x, y))] \vee [\exists y \text{ Loves}(y, x)]$$

$$\forall x [\exists y \text{Animal}(y) \wedge \neg\text{Loves}(x, y)] \vee [\exists y \text{ Loves}(y, x)]$$

3. Standardize variables: each quantifier should use a different one.

$$\forall x [\exists y \text{Animal}(y) \wedge \neg\text{Loves}(x, y)] \vee [\exists z \text{ Loves}(z, x)]$$

4. Skolemize

$$\forall x [Animal(F(x)) \wedge \neg Loves(x, F(x))] \vee Loves(g(x), x)$$

↓  
Skolem functions

5. Drop Universal Quantifiers

$$[Animal(F(x)) \wedge \neg Loves(x, F(x))] \vee Loves(g(x), x)$$

6. Distribute

$$[Animal(F(x)) \vee Loves(g(x), x)] \wedge [\neg Loves(x, F(x)) \vee Loves(g(x), x)] //$$

$\vee \rightarrow \mid$

$\wedge \rightarrow \&$

$\sim \rightarrow \neg$

$\Rightarrow$

$\Leftrightarrow$

$\exists \quad \notin$

$\forall \quad A$
